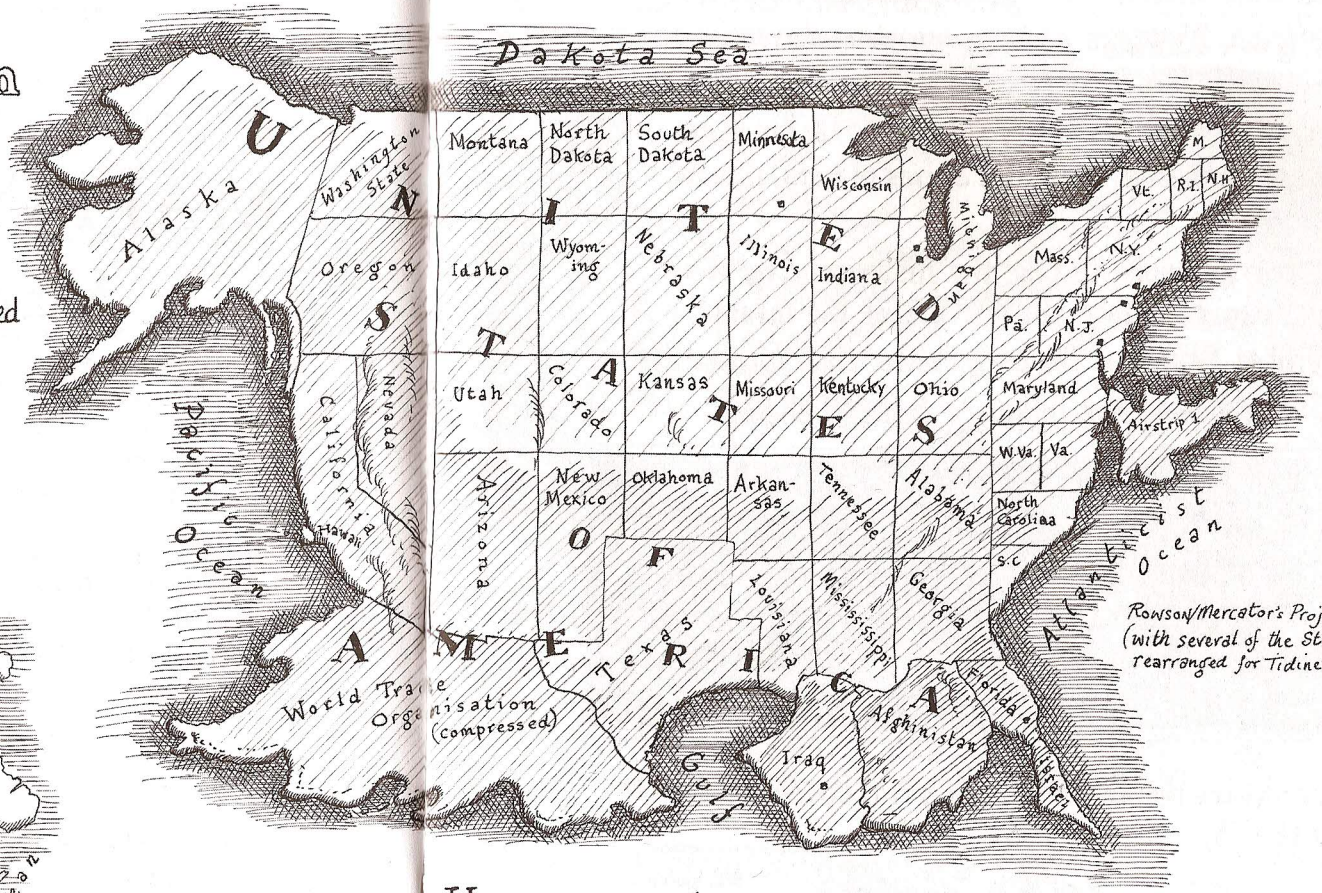
Mapping America

by Martin Rowson

1. All attempts hitherto to produce a *definitive* map of the United States of America entirely accurate in all regards have been *woefully* constrained by the limitations of *conventional* cartography with its outmoded insistence on the primacy of *purely territorial* factors (fig.1)

Fig.1

2. In the first instance this approach necessarily compromises the territorial integrity of United States allowing purely *physical features* (oceans, Canada, *etc.*) to get in the way. A more accurate TERRITORIAL MAP is shown in Fig. 2



Rowson/Mercator's Projection (with several of the States rearranged for Tidiness's sake)

However, even this is so *ultimately inaccurate* on so many levels as to be practically USELESS. An entirely new and radical cartography is therefore required.
